

Cramp edge connecting machine

RU-KEV

Machine to connect glazing ledges with a rebate to a frame with a metal cramp

The Jumbo cramp – edge connecting machine is available as automatic and manual version. With a 90° support and two clamping cylinders one from the top one from the front. Each cylinder has a separate pressure control. Through the electronic control you can place cramps behind and on top of each other into glass ledges. The Cramping device can be mounted on a work bench with a glue spreader. The RU-KEV is operated manual and/or by a foot valve.

Advantages:

- The corners are closed
- No differences in color because sash and ledges frame can be painted together
- The glass ledges are easy to relate to the sash

| Type | Order-No. | Dimensions | Weight |
